EXECUTIVE SUMMARY

Energy Benchmarking Law

In 2009, the Legislature passed E2SSB 5854 Climate Pollution Reduction-Energy Efficiency. The part of the Climate Pollution Reduction legislation that required state agencies, colleges and universities to track and report the energy use of buildings was codified as RCW 19.27A.190. It is also known as the Energy Benchmarking Law.

This report is in response to RCW [19.27A.190 \(5\)](#), which requires the Department of Enterprise Services¹ (DES) to prepare a biennial report summarizing the state portfolio manager master account reporting data.

Four Steps Required by Energy Benchmarking Law

There are four steps required by the Energy Benchmarking Law:

1. Benchmarking building energy use
2. Preliminary energy audits
3. Investment grade audits
4. Building energy retrofits

Benchmarking and Preliminary Audits in Buildings Owned by Agencies, Colleges and Universities

Between 10 percent to 15 percent of buildings greater than 10,000 square feet in size owned by agencies, colleges and universities are benchmarked at the building level.

DES recommended audits for buildings or campuses using more energy than the average for an agency, or more than the average for college or university campuses. Preliminary audits were also recommended for agencies, colleges and universities not benchmarked at either the building or campus level.

Of the 78 percent of colleges for which preliminary audits were recommended, 44 percent completed preliminary audits since 2010. Although agencies and universities have also done a substantial number of preliminary audits, DES was unable to confirm that the preliminary audits were comprehensive and included all facilities.

Benchmarking and Preliminary Audits in Buildings Leased by Agencies, Colleges and Universities

After January 1, 2010, agencies, colleges and universities could not enter into a new lease or renew a lease for a facility with a score below 75, unless certain conditions were met. DES was directed to:

- Establish a process to determine viability of relocation when a facility leased by the state has an energy rating score below 50; and

¹ Previously required of the Department of General Administration, which was one of the agencies merged into DES in October 2011.

- In consultation with the Office of Financial Management, develop a waiver process for facilities leased by the state with an energy rating score below 75 entering into a new lease or lease renewal. In the absence of funding, response to the benchmarking law from agency to agency was inconsistent, making it impractical to develop these processes.

State agencies have benchmarked more than half of leased buildings greater than 10,000 square feet in size for which the agency paid the utility bills directly. Colleges have not benchmarked leased buildings. Universities have benchmarked one leased building.

Investment Grade Audits and Building Energy Retrofits

The Energy Benchmarking Law requires investment grade audits by July 2013 for energy conservation measures identified in Preliminary Audits. Building retrofits that implement all cost effective measures are required by July 2016.

Overview

Energy Benchmarking Law

As noted above, in 2009, the Legislature passed E2SSB 5854 Climate Pollution Reduction—Energy Efficiency. The part of the Climate Pollution Reduction legislation which required state agencies, colleges and universities to track and report the energy use of buildings was codified as RCW 19.27A.190 and is also known as the Energy Benchmarking Law. The text of RCW 19.27A.190 is in Appendix A.

In this law, benchmarking is used to identify opportunities for energy savings in buildings occupied by state government. Buildings that are identified as having high energy consumption are then required to proceed through a process of energy audits. If cost effective efficiency upgrades are identified during the audit phase, the agency is directed to implement the upgrades.

What Is Building Energy Benchmarking?

Building energy performance is benchmarked by recording a building's energy use for one year, to establish a baseline. This makes it possible to compare the energy performance of a building with itself over time. Benchmarking is also used to compare energy use in one building to use in another, or to compare the energy use of one campus of buildings to another.

Benchmarking results are typically expressed as Energy Use Intensity or EUI. All energy consumed within a building, such as electricity, natural gas, propane, wood or steam, is converted to a single common unit of measurement, the British Thermal Unit (Btu). Total kBtus (1000 Btus) consumed over one year are then divided by the gross square footage of the building to express the average energy use of the building per square foot, or kBtu/Sq Ft. This value of kBtu/Sq Ft is the building's EUI.

Buildings with a higher EUI use more energy per square foot than buildings with a lower EUI.

The Benchmarking Law specifies the use of Portfolio Manager, a free, web-accessible utility management application developed by the U.S. Environmental Protection Agency (EPA). Portfolio Manager is used to document the building EUI. Also, for a limited number of building types, Portfolio Manager provides an energy rating score. EPA Portfolio Manager provides scores for Rated Building Types, including offices, warehouses, dorms, K-12 schools and a few others. If a building in the Portfolio Manager is a Rated Building Type, it will be given an energy rating score, similar to the percentile scores used to compare students on standardized tests. The energy rating score can be used to compare a building to other similar buildings. For instance, buildings that get a score of 75 are in the 75th percentile, and use less energy per square foot than 75 percent of similar buildings.

What Is the Portfolio Manager?

The Portfolio Manager is an interactive energy management tool that allows tracking and assessment of energy consumption across an entire portfolio of buildings in a secure online environment. It can be used to identify under-performing buildings, set capital improvement priorities, verify efficiency improvements, and identify successful energy management practices in state facilities.

What Are the Benefits of Benchmarking and Monitoring Building Energy Use?

Studies have shown that metering, recording and monitoring the energy use of a building reduces energy use.

The scores provided by Portfolio Manager for rated building types can be used to set goals for a portfolio of buildings. Buildings that get the Energy Star rating perform better than 75 percent of similar buildings, and use 35 percent less energy than the average building of that type. Buildings that get the Energy Star must also meet or exceed American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. standards for comfort and air quality. Setting a goal for all K-12 schools to get the Energy Star would not only save energy, but would provide documentation for investing in improved comfort and correcting problems with inadequate fresh air to classrooms.

Why Use the EPA Portfolio Manager?

The Portfolio Manager program is a free, web-based tool, which includes free data storage, technical support and training. It can be used to track changes in energy and water use over time in single buildings, groups of buildings, or an entire portfolio. This enables tracking of portfolio-wide, continuous energy management strategies and reductions. It can be used to set capital improvement priorities and assess the effectiveness of current statewide operations, policies and practices. Portfolio Manager offers a uniform way to disclose energy performance to meet internal policies or external requirements.

Technical Support by Department of Enterprise Services (DES)

Prior to January 2010, DES established a master account in the EPA's Portfolio Manager for State of Washington agencies, colleges and universities. Training, technical assistance, and a website containing resources and links was provided to state energy managers by DES. A link to the DES Portfolio Manager Webpage is provided in Appendix B.

DES was also required to develop a technical assistance program to facilitate the implementation of energy audits, utilizing audit services by utilities or energy services companies when possible. This technical assistance program already existed in the DES Energy Program, which uses Energy Savings Performance Contracting (ESPC) with Energy Services Companies (ESCOs) to provide energy audits and building energy retrofits to public agencies. The ESCOs work with the local utility's energy conservation program to maximize energy savings and utility incentives to the agency, college or university. A description of the DES Energy Savings Performance Contracting program is in Appendix C.

Four Steps Required by Energy Benchmarking Law

There are four steps required by the Energy Benchmarking Law:

1. Benchmarking building energy use
2. Preliminary energy audits
3. Investment grade audits
4. Building energy retrofits

Step 1: Benchmarking Building Energy Use

The Benchmarking Law makes agencies, colleges and universities responsible for developing energy benchmarks for their facilities using Portfolio Manager. The benchmarking reports are shared using the master account managed by DES.

In July 2010, the agency, college and university buildings entered into the Portfolio Manager were posted on the public webpage. In 2011 and 2012, agencies, colleges and universities continued to add buildings which were not benchmarked in 2010, and improved the quality of the data tracked by Portfolio Manager.

Early in the process, DES recognized that it was not possible to fully comply with the Energy Benchmarking Law because of inadequate metering on millions of square feet of state buildings. Most agency, college and university buildings shared meters with other buildings on a campus. Relatively few state-owned buildings were metered at the building level. To comply with the spirit of the law and find the best opportunities for building energy retrofits, DES encouraged agencies, colleges and universities to benchmark at the campus level and pursue metering of buildings.

Step 2: Preliminary Energy Audits

Benchmarking results are used to identify buildings with high energy consumption. For buildings with Portfolio Manager scores, a score of less than 50 triggers requirements for a preliminary energy audit. For all other buildings or campuses, DES has used the reported EUI to make recommendations for preliminary audits.

Under the DES Energy Services Performance Contracting program, preliminary audits are a simple examination of existing buildings and systems that identifies potential energy saving measures. The preliminary audit walkthrough includes the facility manager, staff from an energy services performance contracting firm, and a DES energy engineer. The audit walkthrough may take a day or less for a single building or small campus.

The Portfolio Manager program provides energy scores for Rated Building Types such as offices, warehouses and dorms. Agencies, colleges or universities were required to undertake preliminary audits of buildings with an energy score of less than 50. A building with a score of 50 is in the 50th percentile, which means that 50 percent of similar buildings use less energy.

Relatively few state agency, college and university buildings are Rated Building Types eligible to receive a score in EPA's Portfolio Manager. This is due to the unique nature of many state agency buildings, and the limits of available data to create statistically significant models. Only a few audits of agency buildings were required based on building energy scores of less than 50 which were shared with DES. Some offices and dorms on agency or college campuses may not have been entered into Portfolio Manager as Rated Building Types because they were not separately metered.

It is a common misconception that only Rated Building Types with energy performance scores can be benchmarked. Building energy performance may also be benchmarked by recording a building's energy use for one year, and using that as a baseline. From RCW 19.27A.140, "Benchmark' means the energy used by a facility as recorded monthly for at least one year and the facility characteristics information inputs required for a portfolio manager."

For building types not covered by the EPA Portfolio Manager ratings, the Energy Benchmarking Law required DES to develop a portfolio of additional buildings that would benefit from preliminary energy audits. The evaluation methodology and recommendations for audits were posted to the DES webpage in July 2011. Agencies, colleges and universities were to undertake preliminary energy audits for these facilities by July 1, 2012.

The DES Evaluation of Non-Rated Building Types, Recommended Audits for colleges and universities, and Recommended Audits for agencies is provided in Appendix D.

Step 3: Investment Grade Audits

If the preliminary audit identifies energy saving measures, agencies, colleges or universities are then to proceed with an investment grade audit, to be completed by July 1, 2013.

Step 4: Building Energy Retrofits

Agencies, colleges or universities are to implement cost effective measures identified during the investment grade audits. The implementation of the measures is to be completed by July 1, 2016.

Building Energy Benchmarking Results

Benchmarking in Buildings Owned by Agencies, Colleges and Universities

A building or campus is considered by DES to be benchmarked if building size and one full year of energy use is entered in EPA's Portfolio Manager and the Energy Use Intensity (EUI) of the building or campus is visible in the DES master account. Review of building and energy data in the DES master account turned up errors and inconsistencies, some of which have not been corrected. In some cases, energy use is not displaying due to discrepancies in meter data. The quality of the information in Portfolio Manager will improve over time as agencies, colleges and universities continue to actively use it to monitor energy use in buildings. Between 10 percent to 15 percent of buildings greater than 10,000 square feet in size owned by agencies, colleges and universities are benchmarked at the building level.

State-Agency Owned Buildings

In 2011, the Office of Financial Management (OFM) Facilities Inventory showed that state agencies owned almost 6,500 facilities totaling over 32 million square feet. Over half of these (about a million square feet) were very small buildings under 1,000 square feet. About 3,000 buildings (about 31 million square feet) were over 1,000 square feet. Many of these buildings share utilities with other buildings on campuses or compounds. Most are not separately metered. Agencies were encouraged to benchmark at the campus level if meters were not available for each building. About 12 percent of buildings greater than 10,000 square feet in size owned by state agencies are benchmarked at the building level.

College-Owned Buildings

In 2011, the OFM Facilities Inventory showed that colleges owned almost 900 buildings totaling nearly 18.7 million square feet. About 60 of these (about 30,000 square feet) were under 1,000 square feet. Colleges own more than 17 million square feet of buildings larger than 10,000 square feet (about 400 buildings). Most college buildings share utilities with other buildings on a campus. Most are not separately metered. Colleges were encouraged to benchmark at the campus level if meters were not available for each building. Colleges have benchmarked about 15 percent of buildings

10,000 square feet or larger and about two-thirds of campuses.

University-Owned Buildings

In 2011, the OFM Facilities Inventory showed that universities owned almost 42 million square feet of buildings. Most university buildings share utilities with other buildings on a campus. Most are not separately metered. Universities have benchmarked about 12 percent of buildings, and about 70 percent of campuses.

Benchmarking in Leased Buildings

After January 1, 2010, agencies, colleges and universities could not enter into a new lease or renew a lease for a facility with a score below 75, unless certain conditions were met. Twenty-five percent of similar buildings use less energy than a building with a score of 75. DES was directed to establish a process to determine viability of relocation when a facility leased by the state has an energy rating score below 50, and a waiver process for facilities leased by the state with an energy rating score below 75 entering into a new lease or lease renewal. In the absence of funding, response to the benchmarking law from agency to agency was inconsistent, making it impractical to develop these processes. DES has provided technical assistance to lessors and tenant agencies, and encouraged them to benchmark buildings and work together to identify feasible energy saving improvements.

State Agency Leased Buildings

In 2011, the OFM Facilities Inventory showed that state agencies leased over 200 buildings greater than 10,000 square feet for which the agency paid the utilities directly, totaling about 7.3 million square feet. Most of these buildings are separately metered. Agencies have benchmarked more than half of these leased buildings.

College Leased Buildings

In 2011, the OFM Facilities Inventory showed that colleges leased 19 buildings greater than 10,000 square feet in size for which utilities are paid directly, totaling over a half million square feet. None are benchmarked.

University Leased Buildings

In 2011, the OFM Facilities Inventory showed that universities leased 28 buildings greater than 10,000 square feet in size for which utilities were paid directly, totaling over a million square feet. One is benchmarked.

Summary of Building Energy Benchmarking Completed

Table 2.1, 2.2 and 2.3 summarize the benchmarking status of state agencies, colleges and universities. Detail is in Appendix E.

Table 2.1 - Agency, College and University Campuses Energy Benchmarked

	Benchmarked at Campus Level (% of Sq ft)
Agencies	Unknown
Colleges	69%
Universities	70%

Table 2.2 - Agency, College and University Owned Buildings Over 10,000 Sq ft Energy Benchmarked

	Benchmarked at Building Level (% of Sq ft)
Agencies	13%
Colleges	15%
Universities	12%

Table 2.3 - Agency, College and University Leased Buildings Over 10,000 Sq ft Energy Benchmarked

	Benchmarked at Building Level (% of Sq ft)
Agencies	50%
Colleges	0%
Universities	3%

Preliminary Audits

DES recommended audits for buildings or campuses using more energy than the average for an agency, or more than the average for college campuses or universities. Preliminary audits were also recommended for agencies, colleges and universities not benchmarked at either the building or campus level. DES has encouraged agencies and colleges to do comprehensive preliminary audits which include all energy systems in each building, and all buildings on each campus. The ESCOs prefer to do comprehensive audits. A college or agency may have practical reasons for excluding some buildings or limiting scope.

Preliminary Audits Completed in Owned Buildings

Of the 78 percent of colleges for which preliminary audits were recommended, 44 percent have since completed comprehensive preliminary audits of all owned facilities.

Universities recommended for preliminary audits have ongoing energy audit and retrofit programs underway. Although agencies and universities have also done a substantial number of preliminary audits, DES was unable to confirm these preliminary audits were comprehensive and included all facilities.

Table 3.1 - Percent of completed DES recommended preliminary audits

	Percent Of Agency Owned Buildings Recommended For Audits By DES	Percent Of Completed, From Recommended (Due July 2012)
Agencies	47%	---*
Colleges	78%	44%
Universities	67%	---**

**Colleges are concentrated on campuses which typically get comprehensive audits, while agency facilities tend to be spread out. Although many agencies have done audits, DES could not determine that all audits were comprehensive and included all facilities.*

***While Universities have been doing audits and energy retrofits, DES did not determine whether comprehensive preliminary audits were completed for all facilities.*

Preliminary Audits Completed in Leased Buildings

It has become apparent that the most cost effective improvements in building performance can result from fine tuning and improving the controls on existing heating, ventilation and air conditioning systems and when applicable, lighting upgrades. DES has been incorporating preliminary audits and cost-effective energy savings ideas into the renewal process. Several preliminary audits have been conducted on facilities in conjunction with lease renewals. The potential cost savings associated with better energy performance appear to be substantial and should play a significant role in future long-range planning efforts as well as building selections. Energy audits or their equivalent should be an integral part of the building condition assessment and long-term housing decisions.

Investment Grade Audits

Investment Grade Audits are not required by the Energy Benchmarking Law until July 2013. However, many state agencies, colleges and universities have been pursuing audits and retrofits already or are completing them early. Table 4.1 shows energy audit and retrofit activity at agencies, colleges and universities. More audits and energy retrofits are underway now than in the past. Informal conversations with agency and college staff indicate some of the increased audit and retrofit activity is due the requirements of the benchmarking law, but most is due to recent grants provided through the state capital budget and administered by the Department of Commerce to colleges and universities (Engrossed Senate Bill 5127, Sec. 301).

Table 4.1 – Energy Audit and Retrofit Activity 2005-2012 (Owned Buildings)

	Preliminary Audits Initiated In Some Facilities	Some Cost Effective Measures Of Audits Implemented	Comprehensive Preliminary Audits Completed In All Facilities	All Cost Effective Measures Of Comprehensive Audits Implemented
Agencies	23%	17%	---*	---*
Colleges	57%	57%	47%	13%
Universities	67%	67%	17%	17%

**Colleges are concentrated on campuses which typically get comprehensive audits, while agency facilities tend to be spread out. Although many agencies have done audits, DES could not determine that all audits were comprehensive and included all facilities.*

The numbers in Table 4.1 are approximate, based on an informal verbal survey of DES Energy project managers. It would be useful to collect and analyze this data using a consistent definition of cost effectiveness.

Building Energy Retrofits

Building Retrofits that implement all cost effective measures are required by July 2016. Some retrofits are underway or completed.

Success Stories

Olympic College has found an economical way to meter campus buildings and automate energy data uploads into Portfolio Manager:

All Olympic College permanent buildings are now separately metered. Two years of energy data has been collected. The college tried various meter types and data collection strategies to get reliable data. They have installed electrical, gas, and heating water meters. They are using stand-alone meters which do not depend on building controls systems to gather the information. Each meter has built-in software which records the energy consumption data in a format for convenient uploading to Portfolio Manager. The college kept costs low by choosing simple meters which only measure energy consumption.

As soon as the college started getting reliable data from the meters, they began identifying wasted energy. The college found air handlers that were not shutting down even though the controls indicated they were off. Staff found several pumps that were operating in their overload range. The college found a lighting system that was not operating as designed, and several systems that had gone way out of design parameters. Staff identified systems that needed to be re-commissioned. This resulted in energy savings as well as better comfort for the occupants.

Olympic College has completed two DES Energy Savings Performance Contracting projects covering all three campuses. The installed energy saving measures

includes lighting systems, parking lot lighting, many restroom fixture upgrades, and replacement or repair of failing HVAC equipment. The college has long-term plans to replace the main campus heating loop system with individual building heating systems.

Olympic College point of contact for this report:

Bill Wilkie, Director of Facilities Services
360.475.7835, bwilkie@olympic.edu

The Department of Transportation has an effective strategy for identifying and pursuing energy savings in facilities throughout the state:

In a review of facilities input into EPA's Portfolio Manager, and using available EUI values, WSDOT assembled a list of 18 sites, including 61 buildings, to receive preliminary audits by July 1, 2012 (roughly 30 percent of WSDOT's original inventory of 196 reporting public facilities in Portfolio Manager).

Per DES guidelines, WSDOT followed the principle of finding campuses and buildings identified as performing below the 50th percentile. Analysis included factors such as geography, building age, current and future use, completed projects, potential future projects, and common sense. Examples of candidates for preliminary energy audits identified in WSDOT's strategy include: facilities located on mountain passes, facilities that have consistently high energy use/expenditures and facilities that have obvious shortfalls relating to energy efficiency. Preliminary audits are being conducted for all buildings on identified campuses, and will include a review of energy and water using systems in each building.

Included in the strategy are three ferry terminals. EUI values are not sufficient to evaluate performance because they often provide shorepower to vessels, which skews building and site related energy use. Terminal audits will encompass the entire campus, but a significant focus will be placed on the shorepower issue to provide WSDOT with a mechanism to identify equipment and procedural improvements and how best to quantify energy use related with vessels.

WSDOT is using an Energy Services Company (ESCO) in the DES Energy Savings Performance Contracting program to conduct audits and building energy retrofits.

WSDOT point of contact for this report:

Steve Holloway, Operations and Inventory Manager
(360) 705-7895, hollst@wsdot.wa.gov

The Evergreen State College (TESC) has management support for energy conservation. Energy saving efforts are integrated into facility operations and capital programs, and saving energy is a part of the college culture:

Commitment to conservation of energy at the highest level of TESC management enables staff to pursue aggressive energy management strategies. Facilities staff is confident of senior management support, even when something goes wrong and an unexpected cost arises. For example, facilities staff cut heating a little too much, causing some minor damage to buildings. Although repair costs were incurred, college management recognized that the cost was a small offset to the much larger savings achieved by energy conservation.

TESC has used every opportunity and means available to achieve energy budget savings. These include signing a contract with Puget Sound Energy to participate in the Resource Conservation Manager program, using DES Energy Savings Performance Contracting (ESPC) services and expertise, applying for Puget Sound Energy (PSE) conservation grants for much of the ESPC work, applying for Department of Commerce grants, and participating in a pilot demand management program available for several years through PSE and Enernoc. There is support by senior management, a willingness and eagerness of key staff to help and a “can-do” environment in which the little errors that occasionally offset goals are accepted as a cost of doing business.

Energy saving strategies:

- The Resource Conservation Management contract with Puget Sound Energy produced total energy savings during the first three year contract of 18 percent. They received \$126,000 in utility grants, and reduced the EUI of the college below 100.
- Metering and monitoring energy use.
- Building commissioning.
- Facilities management strategies such as shorter warm-up times, shutting off systems near the scheduled end of sessions, avoiding simultaneous heating, and cooling by shutting off heat converters when the chilled water system is started for the summer.
- Operational strategies such as scheduling evening classes in the same building, instead of heating several buildings.
- System retrofits to add lab heat recovery, pool covers, lighting, controls and boiler stack economizers.
- High-visibility projects like LED walkway and parking lot lights, which reduced connected load by about 70 percent, and a 9.2 kW solar PV demonstration array.

The college views capital improvements and renovations as an opportunity to reduce operating costs. Capital planning and the construction program in the last decade are eliminating the college’s constant volume re-heat systems, changing plumbing fixtures to low flow, improving lighting systems and the control of lighting. The college has added new buildings and had more than enough savings through

conservation to show a substantial savings without normalizing for the additional space.

Long-term plans include installing boilers in residence halls, allowing main campus boilers to be shut off during the summer. The challenge is high cost compared to savings.

The Evergreen State College points of contact for this report:

Richard J. Davis, P.E., Facilities Engineer
(360) 867-6136, davisr@evergreen.edu

Employment Security Department (ESD) is pursuing operational and occupant-driven savings in smaller leased buildings:

Smaller buildings are not attractive projects for large Energy Services Companies (ESCOs), and leased buildings are usually not candidates for DES Energy Savings Performance Contracting projects. ESD is consulting with building owners, local utilities, and building occupants to identify and pursue energy reduction measures in their small leased spaces, and using the Portfolio Manager building energy score and EUI in lease negotiations. ESD is actively benchmarking and tracking energy use in all facilities, even those less than 10,000 square feet or otherwise not required by law to be benchmarked.

Occupant energy saving measures are applied agency wide:

- Replacing all stand alone printers, faxes and copiers to multi-functional devices (MFD's) that go into sleep mode when not in use.
- Restricting the purchase of space heaters.

Employment Security point of contact for this report:

Carrie McNamara, Facilities Planner
(360) 407-4524, cmcnamara@esd.wa.gov

The Attorney General's Office (ATG) saved big by making small adjustments to building energy using systems, and raised their building score above 75:

The ATG leases one building which is benchmarked in Portfolio Manager. In a little over a year's time, adjustments and fine tuning to this building's energy consuming systems resulted in a dramatic increase in efficiency and decrease in energy cost. The original baseline for the period ending in August of 2008 was an Energy Star rating of 61. After the work, for the period ending April of 2012, the building rated a score of 85. In addition, the 17-month period following project initiation (December of 2010 through June of 2012) captured a savings of \$41,724.

ATG point of contact for this report:

Cami Feek, Facilities and Office Services Director
(360) 586-4079, camif@atg.wa.gov

Issues and Challenges

There are three common challenges in completing benchmarking, based on discussions with facilities staff at agencies and colleges:

1. Cuts to facilities staff have often eliminated the person who was tracking energy use, since that tended to be either an employee with the least seniority or a Resource Conservation Manager (RCM) hired specifically to assist with energy conservation. In some cases, employees and RCMs who attended 2009 Portfolio Manager training sessions were subsequently cut, leaving the agency or college without anyone trained and without adequate staff time to benchmark and track energy use.
2. Lack of meters on buildings in agency compounds/campuses and college campuses have prevented many agencies and colleges from completing benchmarking at the facility level. Millions of square feet of state buildings are unmetered, making it difficult for agency and college staff to effectively manage energy use in those buildings.
3. Actively managing and reducing energy use is not a high priority of management at some agencies and colleges. Energy conservation is not yet well integrated into agency and college culture at all levels, with exceptions. Some agencies and colleges have support at the highest levels of management for closely managing and reducing energy use. These agencies have benchmarked their facilities at the level allowed by their current metering configurations, and are finding ways to meter facilities and complete energy retrofits. They are also active in energy conservation and implementing improvements using calculated savings.

Although Portfolio Manager software use is free (including data storage and technical support) and Portfolio Manager is a standard for LEED EB and EPA's Energy Star, the software itself is not as intuitive and user-friendly as newer software. A significant problem is that campus meters in Portfolio Manager cannot be updated automatically by the local utility. The Portfolio Manager software update scheduled for 2013 is expected to remedy these problems.

User-friendly automated benchmarking by utilities is not always available in Washington State. Utilities serving more than 25,000 customers are required to upload energy data into Portfolio Manager upon customer request (RCW [19.27A.170](#)). This service is commonly known as automated benchmarking. Automated benchmarking saves staff time for public agencies and private property owners tracking energy use in a portfolio of buildings. Some utilities provide a user-friendly automated benchmarking service which updates energy use data monthly. Others provide a service which is difficult to use or updates energy use data yearly, while still others are not offering automated benchmarking even though they serve more than 25,000 customers.

There is no established project delivery program and funding for making energy efficiency improvements to buildings leased by state agencies. The DES Energy program does energy retrofits of government owned buildings. The State Treasurer's loan program can only be used within the term of the lease under specific conditions. Energy retrofit projects typical of leased buildings are often too small to be attractive to Energy Services Companies (ESCOs). Also, if the funds for the improvement are borrowed, the potential value of the energy savings needs to be realized within the terms of the lease, which is typically limited to five years.

Recommendations

Adequately staff facilities maintenance and operations

Facilities maintenance and operations must be adequately staffed to properly manage energy use and keep equipment working efficiently. Routine maintenance such as filter replacement and proactive maintenance practices keep energy use lower and extend equipment life. Adequate staffing is required to keep occupancy schedules up to date to avoid using energy when buildings are not occupied. The facilities maintenance and operations staff needs adequate time to observe, troubleshoot, and adjust building systems to reduce energy use.

Provide Resource Conservation Managers (RCMs)

RCMs find energy savings in buildings and daily activities. The salary is paid for with the energy and operational savings the RCM finds and maintains. Agencies that have an RCM often use that person to prepare sustainability reports and reports on greenhouse gas emissions or energy use.

Provide energy meters on state buildings

It is not possible to benchmark and track the energy use of a building which is not metered. Millions of square feet of state agency and college buildings are not metered. Provide funding for meters that will automatically upload data to one central spreadsheet or software program at the college or agency, in an easily accessible format which does not require staff time to read meters or collect data manually. Closely monitoring and managing the energy use of a building will reduce energy use.

Require utilities to provide user-friendly automated benchmarking

Customer-friendly automated benchmarking services upload energy use data monthly into the utility customer's Portfolio Manager account, without any other action required of the customer beyond the original request for the service. When utilities do not provide this service, state employees must enter the data manually. This is not a good use of limited state agency and college resources.

Fund new space or renovations to reduce agency energy use

The intent of the Benchmarking Law is to reduce the energy use of state agency buildings. New building and renovation projects as currently delivered are adding to

the energy use of agencies and colleges. Future energy use can be limited by choosing to fund new buildings and renovations that do not add to agency or college energy use. It is possible in some cases to design a new building to use very little energy, and incorporate renewable energy into the building so that it uses less energy than it makes. Properly designed and funded renovations can dramatically reduce the energy use associated with existing space. Funding requests should account for how a proposed building or renovation will impact energy use reduction goals. Alternatives that do not add space, such as shared spaces, hoteling, distance learning, cloud computing, or other creative solutions, should be seriously considered. Buildings have a long life. They should be durable, flexible and designed for the low energy use future.

Provide executive management level support for reducing energy use

Agency and college facilities staff and building occupants respond to clear direction from agency executive management. Facilities staff do not have control over operational decisions by management or other parts of the organization that affect energy use. Adequate funding for energy conservation measures and facilities staffing is often determined by agency or college management.

Create a culture of conservation and sustainability

Thousands of decisions which affect energy use are made every day by building occupants and agency staff at every level. No cost or very low cost opportunities to save energy can be found in these day to day decisions. The best opportunities for reducing energy use dramatically involve changes in how the agency or college executes its mission. These opportunities are not under control of the building maintenance and operations staff. By creating a culture of conservation and sustainability throughout the agency, everyone is enabled to find the best way to complete their mission while reaching for energy reduction goals. This approach is consistent with principles of LEAN, a process to create more value for customers with fewer resources.

Enable efficiency improvements to buildings leased by state agencies

Owners of buildings and the state agencies that occupy space in those buildings would benefit from an organized program to help them fund and execute energy efficiency projects.

Provide for data collection and analysis

The DES Energy Savings Performance Contracting program is a project delivery service, and is only staffed to collect basic data about projects. It would be beneficial to collect and organize information about the benefits of the benchmarking, audits, and retrofits that agencies and colleges are doing.

APPENDICES

Appendix A - Energy Benchmarking Law (RCW) - Qualifying public agency duties - Performance rating - Reports.

RCW 19.27A.190

- (1) The requirements of this section apply to the *department of general administration and other qualifying state agencies only to the extent that specific appropriations are provided to those agencies referencing chapter 423, Laws of 2009 or chapter number and this section.
- (2) By July 1, 2010, each qualifying public agency shall:
 - (a) Create an energy benchmark for each reporting public facility using a portfolio manager;
 - (b) Report to *general administration, the environmental protection agency national energy performance rating for each reporting public facility included in the technical requirements for this rating; and
 - (c) Link all portfolio manager accounts to the state portfolio manager master account to facilitate public reporting.
- (3) By January 1, 2010, *general administration shall establish a state portfolio manager master account. The account must be designed to provide shared reporting for all reporting public facilities.
- (4) By July 1, 2010, *general administration shall select a standardized portfolio manager report for reporting public facilities. *General administration, in collaboration with the United States environmental protection agency, shall make the standard report of each reporting public facility available to the public through the portfolio manager web site.
- (5) *General administration shall prepare a biennial report summarizing the statewide portfolio manager master account reporting data. The first report must be completed by December 1, 2012. Subsequent reporting shall be completed every two years thereafter.
- (6) By July 1, 2010, *general administration shall develop a technical assistance program to facilitate the implementation of a preliminary audit and the investment grade energy audit. *General administration shall design the technical assistance program to utilize audit services provided by utilities or energy services contracting companies when possible.
- (7) For a reporting public facility that is leased by the state with a national energy performance rating score below 75, a qualifying public agency may not enter into a new lease or lease renewal on or after January 1, 2010, unless:

(a) A preliminary audit has been conducted within the last two years; and

(b) The owner or lessor agrees to perform an investment grade audit and implement any cost-effective energy conservation measures within the first two years of the lease agreement if the preliminary audit has identified potential cost-effective energy conservation measures.

(8) (a) Except as provided in (b) of this subsection, for each reporting public facility with a national energy performance rating score below 50, the qualifying public agency, in consultation with *general administration, shall undertake a preliminary energy audit by July 1, 2011. If potential cost-effective energy savings are identified, an investment grade energy audit must be completed by July 1, 2013. Implementation of cost-effective energy conservation measures are required by July 1, 2016. For a major facility that is leased by a state agency, college, or university, energy audits and implementation of cost-effective energy conservation measures are required only for that portion of the facility that is leased by the state agency, college, or university.

(b) A reporting public facility that is leased by the state is deemed in compliance with (a) of this subsection if the qualifying public agency has already complied with the requirements of subsection (7) of this section

(9) Schools are strongly encouraged to follow the provisions in subsections (2) through (8) of this section.

(10) The director of the *department of general administration, in consultation with the affected state agencies and the office of financial management, shall review the cost and delivery of agency programs to determine the viability of relocation when a facility leased by the state has a national energy performance rating score below fifty. The *department of general administration shall establish a process to determine viability.

(11) *General administration, in consultation with the office of financial management, shall develop a waiver process for the requirements in subsection (7) of this section. The director of the office of financial management, in consultation with *general administration, may waive the requirements in subsection (7) of this section if the director determines that compliance is not cost-effective or feasible. The director of the office of financial management shall consider the review conducted by the *department of general administration on the viability of relocation as established in subsection (10) of this section, if applicable, prior to waiving the requirements in subsection (7) of this section.

(12) By July 1, 2011, *general administration shall conduct a review of facilities not covered by the national energy performance rating. Based on this review, *general administration shall develop a portfolio of additional facilities that require preliminary energy audits. For these facilities, the qualifying public agency, in consultation with *general administration, shall undertake a preliminary energy

audit by July 1, 2012. If potential cost-effective energy savings are identified, an investment grade energy audit must be completed by July 1, 2013.

RCW 19.27A.140

The definitions in this section apply to RCW [19.27A.130](#) through [19.27A.190](#) and [19.27A.020](#) unless the context clearly requires otherwise.

- (1) "Benchmark" means the energy used by a facility as recorded monthly for at least one year and the facility characteristics information inputs required for a portfolio manager.
- (2) "Conditioned space" means conditioned space, as defined in the Washington state energy code.
- (3) "Consumer-owned utility" includes a municipal electric utility formed under Title [35](#) RCW, a public utility district formed under Title [54](#) RCW, an irrigation district formed under chapter [87.03](#) RCW, a cooperative formed under chapter [23.86](#) RCW, a mutual corporation or association formed under chapter [24.06](#) RCW, a port district formed under Title [53](#) RCW, or a water-sewer district formed under Title [57](#) RCW, that is engaged in the business of distributing electricity to one or more retail electric customers in the state.
- (4) "Cost-effectiveness" means that a project or resource is forecast:
 - (a) To be reliable and available within the time it is needed; and
 - (b) To meet or reduce the power demand of the intended consumers at an estimated incremental system cost no greater than that of the least-cost similarly reliable and available alternative project or resource, or any combination thereof.
- (5) "Council" means the state building code council.
- (6) "Embodied energy" means the total amount of fossil fuel energy consumed to extract raw materials and to manufacture, assemble, transport, and install the materials in a building and the life-cycle cost benefits including the recyclability and energy efficiencies with respect to building materials, taking into account the total sum of current values for the costs of investment, capital, installation, operating, maintenance, and replacement as estimated for the lifetime of the product or project.
- (7) "Energy consumption data" means the monthly amount of energy consumed by a customer as recorded by the applicable energy meter for the most recent twelve-month period.

- (8) "Energy service company" has the same meaning as in RCW [43.19.670](#).
- (9) "Enterprise services" means the department of enterprise services.
- (10) "Greenhouse gas" and "greenhouse gases" includes carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride.
- (11) "Investment grade energy audit" means an intensive engineering analysis of energy efficiency and management measures for the facility, net energy savings, and a cost-effectiveness determination.
- (12) "Investor-owned utility" means a corporation owned by investors that meets the definition of "corporation" as defined in RCW [80.04.010](#) and is engaged in distributing either electricity or natural gas, or both, to more than one retail electric customer in the state.
- (13) "Major facility" means any publicly owned or leased building, or a group of such buildings at a single site, having ten thousand square feet or more of conditioned floor space.
- (14) "National energy performance rating" means the score provided by the energy star program, to indicate the energy efficiency performance of the building compared to similar buildings in that climate as defined in the United States environmental protection agency "ENERGY STAR! Performance Ratings Technical Methodology."
- (15) "Net zero energy use" means a building with net energy consumption of zero over a typical year.
- (16) "Portfolio manager" means the United States environmental protection agency's energy star portfolio manager or an equivalent tool adopted by the department of enterprise services.
- (17) "Preliminary energy audit" means a quick evaluation by an energy service company of the energy savings potential of a building.
- (18) "Qualifying public agency" includes all state agencies, colleges, and universities.
- (19) "Qualifying utility" means a consumer-owned or investor-owned gas or electric utility that serves more than twenty-five thousand customers in the state of Washington.

(20) "Reporting public facility" means any of the following:

(a) A building or structure, or a group of buildings or structures at a single site, owned by a qualifying public agency, that exceed ten thousand square feet of conditioned space;

(b) Buildings, structures, or spaces leased by a qualifying public agency that exceeds ten thousand square feet of conditioned space, where the qualifying public agency purchases energy directly from the investor-owned or consumer-owned utility;

(c) A wastewater treatment facility owned by a qualifying public agency; or

(d) Other facilities selected by the qualifying public agency.

(21) "State portfolio manager master account" means a portfolio manager account established to provide a single shared portfolio that includes reports for all the reporting public facilities.

RCW 19.27A.170

(1) On and after January 1, 2010, qualifying utilities shall maintain records of the energy consumption data of all nonresidential and qualifying public agency buildings to which they provide service. This data must be maintained for at least the most recent twelve months in a format compatible for uploading to the United States environmental protection agency's energy star portfolio manager.

(2) On and after January 1, 2010, upon the written authorization or secure electronic authorization of a nonresidential building owner or operator, a qualifying utility shall upload the energy consumption data for the accounts specified by the owner or operator for a building to the United States environmental protection agency's energy star portfolio manager in a form that does not disclose personally identifying information.

(3) In carrying out the requirements of this section, a qualifying utility shall use any method for providing the specified data in order to maximize efficiency and minimize overall program cost. Qualifying utilities are encouraged to consult with the United States environmental protection agency and their customers in developing reasonable reporting options.

(4) Disclosure of nonpublic nonresidential benchmarking data and ratings required under subsection (5) of this section will be phased in as follows:

(a) By January 1, 2011, for buildings greater than fifty thousand square feet; and

(b) By January 1, 2012, for buildings greater than ten thousand square feet.

(5) Based on the size guidelines in subsection (4) of this section, a building owner or operator, or their agent, of a nonresidential building shall disclose the United States environmental protection agency's energy star portfolio manager benchmarking data and ratings to a prospective buyer, lessee, or lender for the most recent continuously occupied twelve-month period. A building owner or operator, or their agent, who delivers United States environmental protection agency's energy star portfolio manager benchmarking data and ratings to a prospective buyer, lessee, or lender is not required to provide additional information regarding energy consumption, and the information is deemed to be adequate to inform the prospective buyer, lessee, or lender regarding the United States environmental protection agency's energy star portfolio manager benchmarking data and ratings for the most recent twelve-month period for the building that is being sold, leased, financed, or refinanced.

(6) Notwithstanding subsections (4) and (5) of this section, nothing in this section increases or decreases the duties, if any, of a building owner, operator, or their agent under this chapter or alters the duty of a seller, agent, or broker to disclose the existence of a material fact affecting the real property.

Notes:

***Reviser's note:** The "department of general administration" was renamed the "department of enterprise services" by 2011 1st sp.s. c 43 § 107.

Appendix C - DES Energy Savings Performance Contracting Program

Energy Saving Performance Contracting (ESPC) is a method of identifying, implementing, and financing energy and utility efficiency projects. By leveraging utility savings along with grants and capital dollars, projects can typically be funded within existing budgets. ESPC is a partnership between the client agency, the Energy Service Company (ESCO), and the Department of Enterprise Services (DES) Energy Program.

Client Agencies receive guaranteed construction costs, guaranteed energy savings, and guaranteed equipment performance. The ESCO and the DES Energy Program work with the utilities to maximize the available utility incentives. The ESCO can also provide Building Benchmarking assistance, energy reduction, and carbon reduction goal assistance. The DES Energy Program provides the customer with energy engineering oversight and contract management services.

Appendix D – Department of Enterprise Services (DES) Audit Recommendations

DES Evaluation of Non-Rated Building Types

Many state agency and college buildings are not Energy Star Portfolio Manager Rated Building Types. For instance, offices and warehouses are Rated Building Types, but college classroom buildings and prisons are not. RCW 19.27A.190 required DES to evaluate non-rated building types by July 1, 2011, to determine which of these buildings need preliminary energy audits.

Site Energy Use Intensity (EUI)

Site Energy Use Intensity (EUI) will be used to identify buildings which may benefit from an energy audit. The EUI is the annual energy use of each building per square foot. If the building is on a campus with shared utilities, and is not yet individually metered, the campus EUI will be used. The building or campus EUI may be compared to the average EUI in the State portfolio for that building or campus type, or the National Average Site EUI of a similar building type in the Commercial Buildings Energy Consumption Survey (CBECS). The National Average EUI is useful as a rough comparison, although buildings with unique energy demands may vary from the average.

Using Building Energy Performance Distributions to Find Savings Opportunities

The data collected by EPA to create Rated Building Types is useful for estimating the potential energy savings available in non-rated buildings. For example, buildings in the lowest-performing percentile use more than 35 percent more energy than the average building. A small number of worst performers use more than twice as much energy as the average. It is likely that non-rated building types have similar performance distributions. For this reason, buildings using more energy than the average make good candidates for preliminary energy audits.

Some building types use more energy. Food Service and Science Buildings are examples of energy intensive buildings. A high EUI does not mean the building is inefficient. However, the financial benefit of reducing the energy use of a science building by just 10 percent may be the same as reducing the energy use of an office building by 30 percent. 5 percent to 10 percent savings can often be found in no-cost or low-cost operational or controls adjustments. For this reason, all buildings with high EUI make good candidates for preliminary energy audits.

Based on the probable energy performance distribution of non-rated building types, and the greater financial benefit from small percentages of energy savings in buildings using more energy per square foot, preliminary audits are recommended for all non-rated buildings using more energy than the average of comparable buildings.

Colleges -- Half of the community and technical college campuses reporting in the State portfolio have EUI under 80. Campuses using less than 80 kBtu/Sq Ft-yr routinely benefit from DES Energy audits that produce cost effective energy conservation measures. Comprehensive preliminary audits are recommended for community and technical college campuses with campus average EUI greater than 80.

Universities -- Comprehensive preliminary audits are recommended for university campuses with campus average EUI greater than 120 (all universities are already conducting audits).

Large Agencies -- DES recommends that agencies with large numbers of buildings, such as the Department of Transportation (DOT), Department of Corrections (DOC) and the Department of Social and Human Services (DSHS), initiate comprehensive preliminary audits of campuses which use more energy than the average campus in that agency.

Small Agencies -- Agencies with small numbers of buildings will not have enough data to find averages. Preliminary audits are recommended for non-rated building types over 10,000 square feet with EUI greater than 80.

When all state agency and college buildings are individually metered and benchmarked, the building energy use data may be specific enough to identify buildings with lower EUI that would benefit from energy audits. For instance, colleges can compare classroom buildings or gymnasiums across the state portfolio, taking into account differences such as hours of use. At this time, there are not enough state agency and college buildings separately metered and benchmarked to allow this level of analysis.

List of Recommended Preliminary Audits, To Be Completed by July 1, 2012

For all agency or college buildings not benchmarked in Portfolio Manager by July 1, 2011, a preliminary audit was recommended, to be initiated by November 1, 2011 to allow collection of energy data during the winter heating season. The Energy Services Company (ESCO) performing the preliminary audit enters the facilities into Portfolio Manager (benchmarks buildings) for the agency or college for a nominal fee. Buildings or campuses are taken off the list recommending an audit if benchmarking shows they use less than the average EUI as described above and if the preliminary audit found no cost effective energy conservation measures.

If an agency or college is on the list of recommended preliminary audits, they may request an audit from DES Energy, or follow the DES ESPC Guidelines to procure the audit from an Energy Services Company. They may request to be taken off the list if a comprehensive audit was done within the last five years, and all cost effective measures implemented.

Recommended Preliminary Audits for State Agencies

1. Building uses unique to agencies like DSHS or DOT may not fit Commercial Building Energy Consumption Survey (CBECS) categories neatly. Agencies will benefit from comparing energy use of similar facilities within the agency.
2. Preliminary audits are recommended for buildings greater than 10,000 square feet that use more energy per square foot than the average agency building.
3. Large buildings with high EUI have the greatest opportunity for savings because even small percentages of improvement can create substantial savings.
4. Campuses are good candidates for audits even if the campus average is not high. It is probable that some buildings on the campus use energy well above the average.
5. By metering each building and tracking energy use over time, agencies can continuously improve performance.
6. Preliminary audits are recommended for all buildings or campuses not benchmarked in Portfolio Manager, although it would be preferable to find the best candidates by benchmarking before starting audits.

Based on the available data, preliminary audits were recommended for the following agencies:

- **Corrections, Department of (DOC)**

WSU Extension Energy has benchmarked facilities and shared with DES. DES is reviewing. Comprehensive audits will be recommended for facilities with higher than average for similar DOC facilities. DOC is already working with an ESCO.

- **Transportation, Department of (DOT)**

DOT has benchmarked most buildings, and is doing quality control on data. DES will work with DOT to recommend audits of buildings having higher than average energy use for similar DOT facilities. DOT is already working with an ESCO.

- **Employment Security, Department of (ESD)**

Preliminary audits are recommended for buildings greater than 10,000 square feet that use more energy per square foot than the average ESD building (EUI of 80), and for which ESD is billed directly for utilities. For building uses unique to ESD that do not fit the office category, ESD will benefit from comparing energy use of similar facilities within the agency.

- **Fish and Wildlife, Department of (WDFW)**

A preliminary audit is recommended for WDFW Region 4 Office, which is a Rated Building Type with a rating of less than 50.

- **Labor and Industries, Department of (L&I)**

Preliminary audits are recommended for buildings greater than 10,000 square feet that use more energy per square foot than the average L&I building (EUI of 60).

Building uses unique to L&I may not fit the office category. L&I will benefit from comparing energy use of similar facilities within the agency.

- **Patrol, State (WSP)**

Preliminary audits are recommended for buildings greater than 10,000 square feet that use more energy per square foot than the average WSP building (EUI of 111). The labs and Marysville campus were excluded from the average EUI calculation. Building uses unique to WSP may not neatly fit rated building types or CBECS categories. WSP will benefit from comparing energy use of similar facilities within the agency.

- **Revenue, Department of (DOR)**

A preliminary audit is recommended for DOR 6300 Linderson Bldg, which is a Rated Building Type with a rating of less than 50.

- **Social and Health Services, Department of (DSHS)**

Preliminary audits are recommended for buildings greater than 10,000 square feet that use more energy per square foot than the average DSHS building (EUI of 116). Building uses unique to DSHS may not neatly fit rated building types or CBECS categories. DSHS will benefit from comparing energy use of similar facilities within the agency. This recommendation to DSHS is based on available data, which may not be complete.

Agencies for which no audits are recommended

Based on the available data, no preliminary audits were recommended for the following agencies:

- Agriculture, Department of
- Commerce, Department of
- Ecology, Department of
- Financial Institutions, Department of
- Financial Management, Department of
- Health, Department of
- Health Care Authority
- Historical Society
- Lottery
- Parks Commission
- Utilities and Transportation Commission

Agencies not benchmarked, or partially benchmarked

Based on the available data, the following agencies are not benchmarked or are in the process of benchmarking. There is insufficient information to determine which facilities in these agencies need audits:

- General Administration²

² Benchmarking of individual buildings on Capitol Campus will happen over the next year.

- Licensing, Department of
- Liquor Control Board
- Military Department (*WSU Extension Energy is providing assistance*)
- Natural Resources, Department of (*DNR has requested assistance from WSU Extension Energy*)

Recommended Audits for Colleges and Universities

1. Large buildings with high Energy Use Intensity (EUI) have the greatest opportunity for savings because even small percentages of improvement can create substantial savings.
2. Campuses are good candidates for audits even if the campus average is not high. It is probable that some buildings on the campus use energy well above the average.
3. By metering each building and tracking energy use over time, colleges and universities can continuously improve performance.
4. Preliminary audits are recommended for all buildings or campuses not benchmarked in Portfolio Manager, although it would be preferable to find the best candidates by benchmarking before starting audits.

Comprehensive preliminary energy audits of all campus buildings are recommended for college campuses having an EUI greater than 80. Many colleges are already doing audits.

Benchmarked College Energy Use	EUI
Highline Community College	144
Community Colleges of Spokane	103
Tacoma Community College	94
Skagit Valley College	87
Columbia Basin College Total	83
Cascadia Community College	77
Bates Technical College	73
Yakima Valley Community College	66
Lake Washington Technical College	58
Grays Harbor College	52

Average campus EUI (highest and lowest values is regarded)	80
National Average from CBECS database	120

Colleges for which no audits are recommended

Based on the available data, no preliminary audits were recommended for the following colleges:

- Bates Technical College
- Cascadia Community College
- Yakima Valley Community College
- Lake Washington Technical College
- Grays Harbor College

Colleges for which preliminary audits are recommended

Based on the available data, preliminary audits are recommended for the following colleges:

- Columbia Basin College
- Community Colleges of Spokane
- Highline Community College
- Skagit Valley College
- Tacoma Community College

Colleges not benchmarked, or partially benchmarked

Based on the available data, the following colleges are not benchmarked or are in the process of benchmarking. There is insufficient information to determine which facilities need audits. Most of these colleges are working with WSU Energy or an ESCO, and are benchmarking.

- Bellevue College (*BCC is moving energy data from Utility Manager into Portfolio Manager*)
- Bellingham Technical College (*BTC energy data is in Portfolio Manager, not yet shared with DES*)
- Big Bend Community College (*requested assistance, working with WSU Extension Energy*)
- Centralia College (*requested assistance, working with WSU Extension Energy*)
- Clark College (*in the process of benchmarking*)
- Clover Park Technical College (*requested assistance, working with WSU Extension Energy*)
- Edmonds Community College (*campus submetered, first full year of energy data not yet available*)
- Everett Community College (*ECC moved energy data from Utility Manager into Portfolio Manager, and is doing a quality control review*)
- Green River Community College (*GRCC is moving energy data from Utility Manager into Portfolio Manager*)
- Lower Columbia College (*requested assistance from WSU Extension Energy*)
- North Seattle Community College (*requested assistance, working with WSU Extension Energy*)
- Olympic College (*campus submetered, first full year of energy data not yet available*)

- Peninsula College (*requested assistance, working with WSU Extension Energy*)
- Pierce College (*requested assistance, working with WSU Extension Energy*)
- Renton Technical College (*requested assistance, working with WSU Extension Energy*)
- Seattle Central Community College (*requested assistance, working with WSU Extension Energy*)
- Shoreline Community College (*requested assistance, working with WSU Extension Energy*)
- South Puget Sound Community College (*requested assistance, working with WSU Extension Energy, shared data is being reviewed*)
- South Seattle Community College
- Walla Walla Community College
- Wenatchee Valley College (*facilities entered into Portfolio Manager, but not yet shared with DES*)
- Whatcom Community College (*WCC is using Utility Manager, but has not yet entered facilities into Portfolio Manager or shared with DES*)

For all above college campuses not benchmarked in Portfolio Manager by July 1, 2011, GA, now DES, recommended a comprehensive preliminary audit, be initiated by November 1, 2011 to allow collection of energy data during the winter heating season. The Energy Services Company (ESCO) performing the preliminary audit will benchmark the facilities for the agency or college for a nominal fee. Buildings or campuses will be taken off the list recommending an audit if benchmarking shows they have less than the average EUI as described above and in the table below, and if the comprehensive preliminary audit found no cost effective energy conservation measures. DES will include information on audits in the next biennial report.

Recommendations for Universities

All of the universities are already doing energy audits and energy retrofits. DES Energy recommends universities set progressively lower EUI goals for existing buildings and use comprehensive audits to pursue them. See table below:

Benchmarked University Energy Use	EUI
Eastern Washington University	123
The Evergreen State College	95
University of Washington	183
Washington State University (WSUS only)	96
Western Washington University	110
Average of available data	121
National Average from CBECS database	120

Central Washington University (CWU) has put buildings into Portfolio Manager. (There is a technical problem with getting CWU energy data to show.)

Washington State University benchmarking is available only for the WSUS campus.

APPENDIX E – Summary of Benchmarked Buildings

- Table E.1 – Building EUI's (2009 – 2011) shows buildings for which energy use is displayed in the DES Portfolio Manager Account.
- Table E.2 – EUI's (2009 – 2011) shows campuses for which energy use is displayed in the DES Portfolio Manager Account.
- Tables E.3, E.4, and E.5 shows all buildings in the DES Portfolio Manager Account.

Review of building and energy data in the DES master account turned up errors and inconsistencies, some of which have not been corrected. In some cases, energy use is not displaying due to discrepancies in meter data. The quality of the information in Portfolio Manager will improve over time as agencies, colleges and universities continue to actively use it to monitor energy use in buildings.

Facility Name (Owned and Leased)	Site Energy Use Intensity (EUI)			Energy Rating Score (2011)	Total Floor Space (Sq. Ft.)	City	Zip Code	Notes	Unique Building Identifier
	2009	2010	2011						
ATG Olympia 2425 Bristol Court	63.8	62.9	45	84	54744	Olympia	98502		
BBCC Main Bldg 1000	65.8	62.6			5091	Moses Lake	98837		A09197
BBCC Main Bldg 1200	110.7	126.1			27250	Moses Lake	98837		A00516
BBCC Main Bldg 1400	58	50.4			32153	Moses Lake	98837		A08476
BBCC Main Bldg 1500	38.8	31.1			24468	Moses Lake	98837		A06737
BBCC Main Bldg 1600	70.2	77.1			17760	Moses Lake	98837		A02057
BBCC Main Bldg 1700	248.9	235.5			24464	Moses Lake	98837		A08441
BBCC Main Bldg 1800	95	92.6			66935	Moses Lake	98837		A06637
BBCC Main Bldg 1900	57.2				13568	Moses Lake	98837		A03886
